Manufacturer: [Yamaha](#)

### Description

Powerful, versatile and extremely capable: the Grizzly 700 EPS is the ATV that simply won't give up. With a 686cc liquid-cooled 4-stroke single-cylinder engine, it has the biggest and most powerful engine in the Yamaha ATV line-up. Yet, it's still the lightest ATV in its class.

Less weight means the engine has more power available for the work: carrying up to 130kg on the racks seems easy. Yamaha's 3-mode On-Command® drive system, user-friendly dual range automatic transmission and fully independent rear suspension add up to incredible traction, lightweight handling and driveability. Also in Special Edition waterdipped silver and Special Edition blue with aluminium wheels.

### Details
